What is the definitive set of rules for using Alamofire vs. URLSessionDownloadDelegate and the download task? A: A simple answer is no answer. Not that there isn't documentation or a definitive set of rules, but the devil is in the detail. Not everyone is using it correctly, and Alamofire has a few "gotchas" to be aware of. The biggest thing is that Alamofire's Response object and URLSessionDownloadDelegate's ResponseObject aren't the same. ResponseObject is abstract and is designed to be extensible. It is effectively a dictionary which conforms to the NSDictionary protocol. Alamofire Response is an Alamofire.Response which is designed to be platform independent, and is pretty much similar to NSHTTPURLResponse. But the devil is in the details. If you want to parse the response, then you'll need to take the response object that you get from Alamofire, and pass that to a URLSessionDownloadDelegate subclass. You'll need to parse out the response manually. Like this. func imagePickerController(_ picker: UIImagePickerController, didFinishPickingMediaWithInfo info: [UIImagePickerController
